The following is statement of reasons for the indication of allowable subject matter.

Independent claim 1 of the instant invention recites an image reading apparatus comprising:

original pressing means having a surface opposed to the reading means for pressing the original to said reading means; and

a color reference member used as a color reference at the time when said information is read by said reading means;

wherein said color reference member is arranged between said reading means and said original pressing means, and said

original pressing means is inclined and disposed such that upstream end portion or a downstream end portion of the opposed surface is in contact with said reading means respectfully at an upstream side or a downstream side of said reading location, and the opposite end portion of said opposed surface is separated from said reading means by a predetermined distance.

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Claims 3 and 5-9 depend, directly or indirectly, on claim 1, and are therefore allowable.

Independent claim 12 of the instant invention recites an image reading apparatus comprising:
